

## Remote Facilities Management

**ACTIVELY MONITORS GENERAL  
CONDITIONS OF FACILITY OPERATIONS**

### **SAFETY INSPECTION & MANAGEMENT:**

Mobile inspection and management systems provide cloud-based safety and inspection software. Safety managers and professionals around the world use these systems on the web through computers, smartphones and tablets to help increase safety and compliance, improve efficiency and eliminate tedious paperwork and data entry tasks.

### **REMOTE MONITORING:**

Remote Facilities Monitoring systems provide a complete m2m remote management solution that enables you to monitor, control and supervise the performance and operation of remote equipment and installations via Ethernet, GSM, GPRS or 3G/4G networks. These systems cover complete end-to-end solutions for power generators, renewable energy systems, telecom base stations, tank monitoring, building and HVAC systems, industrial automation and much more.

### **KEY FEATURES:**

- Track Temp. & Humidity Levels
- Monitor Hours of Equipment Usage
- GPS Technology
- Geofencing or Location Perimeter Options
- Machine Health Over Given Period of Time
- Preventative Maintenance Reporting
- Historical Reports & Alerts

### **KEY BENEFITS:**

- Increase productivity by reducing time spent on safety and compliance
- Access safety data anywhere, anytime on the web via smartphones and tablets
- Manage energy consumption to increase lifetime of batteries
- Reduce on-site visits and ensure that equipment operates as desired
