

NMS821/826 GPS ASSET MANAGEMENT QUICK-START GUIDE

Setting up your device

Once received, the NMS821 and NMS826 asset tracking devices need to be set up in the NovaAssure platform by the Customer Administrator. The below list outlines the basic process flow with detailed instructions in the pages following.

Step One: Device familiarization and power

Step Two: Platform familiarization and set up

A. Name / Rename Devices

B. Create Users

C. View the location: Current or Historical

D. View and Set up Alerts

E. View and Set up Geofences

F. View and set up reports

The following pages illustrate the basic functions listed above.

Setting up your device

Step One: Device Familiarization and Power

Power on device

Remove rubber side cover

Move On/Off switch to "ON"

Color	Function
Red	Charging
Amber	Cellular
Green	GPS
Solid: Lock	
Flashing: Searching	

LED Functionality

- Check the LED's on the device as you power it on
- The unit should show solid amber and green lights after 10-30 seconds after powering on (this means the device has an active cellular signal and GPS position)
- If needed, charge the GPS device using the USB cable and power brick provided. Leave plugged in for 4-6 hours for a full charge. When charging the red light will be solid.

Troubleshooting FAQ

My battery device LED's aren't turning on - Please plug your device in with the included USB charger, the red LED will turn on and start blinking, please allow 1-4 hours for a full charge.

My battery device's position is not correct - For the most accurate position, take your device to a window or outside and power cycle it by turning it off for 10 seconds and turning it back on. This will cause the device to acquire a new GPS lock and report it to the NovaAssure platform.
