

Container Management

Real-Time Remote Container Tracking Solution

Introducing the cutting-edge IoT Container Management and Tracking System, a solution designed to enhance the efficiency, security, and transparency of global shipping operations. Leveraging state-of-the-art connected IoT devices, our system provides real-time tracking and monitoring capabilities for shipping containers throughout their journey, ensuring a seamless and reliable logistics experience.

Enhanced Container Management

With industry-leading hardware devices that are fully certified by all parties you will improve container fleet utilization, reduce dwell/cycle times and minimize repositioning costs with precise information on equipment location and status.

Features

- Real-Time GPS Tracking
- Geofencing Capabilities
- 24/7 Real-Time Alerts
- Easy Setup/Installation
- Alerts & Reports Via Text or Email
- Trip & Activities Reporting
- Rugged IP67 Devices
- Estimate distance for deliveries
- Automated report for duration in one location for billing

Container Security

When you know where your containers are and where they are being transported, you can easily manage transit duration and overall use. Receive live updates on container movements, enabling proactive decision-making and improved supply chain visibility.

Container Application
