# Remote Facilities Management

Active Monitoring of General Conditions & Facility Operations

Safety Inspection & Management

Mobile inspection and management systems provide cloud-based safety and inspection reassurance. Safety managers and professionals around the world use our web-based system via laptops, smartphones and tablets to help increase safety and compliance, improve efficiency and eliminate tedious paperwork and data entry tasks.

Remote Monitoring

Remote Facilities Monitoring systems provide a complete m2m remote management solution that enables you to monitor, control and supervise the performance and operation of remote equipment and installations via Ethernet, GSM, GPRS or 3G/4G LTE networks. Our systems cover complete end-to-end solutions for power generators, renewable energy systems, telecom base stations, tank monitoring, building and HVAC systems, industrial automation, remote server facilities and much more.

Features:

- **Track temp. & humidity levels**
- **Monitor hours of equipment usage**
- **GPS Technology**
- **Geofencing / location perimeter options**
- **Machine health over given period of time**
- **Preventative maintenance reporting**
- **Historical Reports & Alerts**

Benefits:

- **Increase productivity by reducing time spent on safety and compliance**
- **Access safety data anywhere, anytime on the web via smart phones and tablets**
- **Manage energy consumption to increase lifetime of batteries**
- **Reduce on-site visits and ensure that equipment operates as desired**
