

The solution offers an added layer of security for insurance claim processing, precise GPS tracking, historical and live in-cab recording, and a desktop / mobile app that allows you to manage your fleet on-the-go.

What's more, our solution ensures that drivers stay on schedule and offers real-time updates to managers about their driver's location.

N.E.M.T.

Non Emergency Medical Transportation Visual System

Nova's Non Emergency Medical Transportation Visual Solution provides a robust dash cam fleet management solution that will improve driver behavior, address patient complaints, and aid in insurance claim processing. Our dual-facing AI Dash cameras are easy to install and can help you monitor your fleet's activities in real-time on the NovaAssure Platform. With our solution, you can rest assured that your patients receive the best possible care anywhere, at any time.

When dealing with those Non Emergency Medical Transportation passengers who might be of compromised mental faculties or altered medical conditions, it is important to have the impartial and unbiased documentation of an expert witness in the form of our mobile AI video solution that can accurately capture in-cab events that have occurred in case there is need to provide evidence to medical professionals or for company related safety concerns.

Solution Features

- Driver live view
- Historical lookup
- Dash cam front/rear view
- Real-time local monitoring from the cab with multiple 1080p cameras assures complete safety
- Route duration report showing time, location and duration of driver stops to measure performance
- Total time and miles spent for each drivers shift to monitor efficiency
- Multi-alerts functions for driver location, video events, harsh braking, speeding, idling, and more.
- Artificial intelligence detects distracted, drowsy, and unsafe driving behaviors.
